

Productivity is in our DNA.

The supply and demand imbalance in radiology creates a critical need to optimize physician efficiency and productivity. To relieve the strain on its physicians, Quantum Imaging & Therapeutic Associates set an aggressive goal to increase FTE capacity by 20% – effectively turning 1 FTE into 1.2 FTE. To achieve this lofty goal, their software developers and radiologists teamed up to implement a solution building upon proven management techniques. Together they created novel tools and analytics to manage their practice and individual performance. This is Helix Pace.

RADIOLOGY PERFORMANCE INNOVATION SINCE 2009

Helix Pace was built upon decades of diagnostic imaging and practice management experience – combined with deep imaging workflow and data science knowledge.

The technology that powers Helix Pace has improved productivity and the bottom line for our parent company, Quantum Imaging & Therapeutic Associates. Just eight weeks after implementation, Quantum saw a 15% productivity increase. And they've sustained that performance level ever since.

Achieve similar results with the customizable real-time analytics and reporting tools of Helix Pace.

REAL-TIME ANALYTICS FOR REAL RESULTS

- Track real-time workflow data.
- Gain operational and productivity insights.
- Manage a full spectrum of business activities from event level, to staff level, to practice level.
- Improve efficiency, profitability, and morale.
- Increase productivity significantly.

PERSONALIZED PROGRAMS

- Predict ways to optimize success for individual radiologists.
- Set productivity goals for each seat or clinical role.
- Assign custom RVU levels to CPT codes.
- Convert non-RVU activities into measurable RVUs.
- Run customized reports to track performance against goals.

Measure. Manage. Improve. Repeat.

“When performance is measured, performance improves. When performance is measured and reported back, the rate of improvement accelerates.”

– THOMAS S. MONSON

Helix Pace opens up a myriad of opportunities for measuring, reporting, and analyzing data. Set new, data-informed goals with a unique level of clarity and insight. You can manage and improve performance almost immediately. Then develop a continuous improvement process through dynamic, real-time practice management.

Standard RVUs play a role in the complexity of balancing workload. Certain high-value, low-effort RVUs are often “cherry-picked.” This leaves some RVUs waiting perpetually at the end of the line. Worse, some non-revenue generating activities – which are critical parts of a radiologist’s role – may be left even further behind.

Helix Pace solves this problem. Our solutions allow you to manage work seamlessly – whether it generates revenue or not.

- Set custom values for specific CPT codes to encourage balanced work efforts, tracking both custom and standard values simultaneously.
- Set clinical RVUs for non-revenue/OT work, such as clinical consults, protocols, conferences, etc.
- Create a transparent definition of success through clearer communication of expectations, progress, and productivity.
- Simplify staff evaluations with objective, data-based assessments.

MANAGE THE FUTURE OF YOUR PRACTICE

Improving productivity through real-time practice management is no longer a luxury – it is essential in today’s complex healthcare environment.

Call us today to learn how we can partner with you to improve productivity and practice management for your organization.

Medicare diagnostic imaging spending fell 21% from 2006 to 2010[†]

* Quantum Imaging and Radiology Associates achieved this result using the technology that powers Helix Pace in two months.
